Driving Eisenhower Tunnel

When it closes

The tunnel bores through the Continental Divide, so it doesn't close for snow the way an open summit does. The approaches on both sides do, for avalanche control, whiteout conditions, and the crashes that pile up on a steep, high-altitude grade in bad weather. Chain law and traction law restrictions on I-70 through this stretch are common all winter, and holiday ski traffic can back the approaches up for miles even in clear weather.

Are chains required at the Eisenhower Tunnel?

CDOT sets traction and chain law restrictions on I-70 through this stretch, and they tighten fast in a storm.

How high is the Eisenhower Tunnel?

11,158 feet, the highest point on the U.S. Interstate Highway System. Compare it with Vail Pass further west on the same corridor.

How far is the Eisenhower Tunnel from Denver?

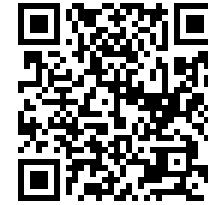

About 60 miles west on I-70. Track your mile marker through the tunnel and over the Divide with the MileCheck app on CarPlay or Android Auto.

Where are the plows?

The live page shows each one as an arrow pointing the way it is heading. Parked trucks are listed too.

Notes

Live conditions

milecheckapp.com/passes/eisenhower/

Cameras, closures and road reports from CDOT. This sheet was built September 29, 2026. Check the live page before you leave.

Snow and avalanche

Snow depth for this road is measured at the Loveland Basin SNOTEL station, 11,410 ft, about 2 miles from the tunnel. The avalanche forecast comes from CAIC. Both are on the live page.

In the car

MileCheck shows your mile marker, the nearest camera and the alerts ahead, on CarPlay and Android Auto. The mile marker works without a signal.

About this map

The numbered stops are a selection from OpenStreetMap along the roads this sheet is about. This map does not show every stop. Gates and seasonal closures are not drawn.
