Driving Snoqualmie Pass

What WSDOT's restriction lines mean

Read the eastbound and westbound lines separately. The rule shown for your direction controls.

WSDOT line	Passenger car	AWD or 4WD passenger car	Truck or large vehicle
Traction tires advised	WSDOT advises traction tires. Check the posted signs before climbing.	The advisory still applies. AWD does not replace tire traction.	Oversize loads are prohibited under this advisory. Check commercial restrictions for the vehicle and load.
Traction tires required	Use approved traction tires.	Use approved traction tires. AWD is not an exception to this requirement.	Vehicles over 10,000 lb gross vehicle weight rating must use chains under WSDOT's guide.
Chains required on all vehicles except all-wheel drive	Install approved chains or another device approved for this requirement.	The chain exception applies only when all wheels are engaged, approved traction devices are fitted, and chains for at least one set of drive tires are carried.	Do not use the passenger AWD exception for a vehicle over 10,000 lb GVWR. Follow the commercial chaining rules.
Chains required on all vehicles	Install chains.	Install chains. The AWD exception does not apply.	Install chains as specified for the vehicle and axles.
Oversize vehicles prohibited	An ordinary-size car is not an oversize load. Other posted restrictions still apply.	Same rule.	An oversize load cannot enter the restricted section. Check the permit and the posted restriction before continuing.

An AWD badge is not a waiver for every chain sign. The wording can change during a storm. Follow the sign on the road if it differs from an earlier report on your phone.

Where the pass is on I-90

WSDOT labels the summit camera **I-90 at MP 52: Snoqualmie Summit**. Its pass report gives an elevation of **3,022 ft**. North Bend is west of the climb. Easton and Cle Elum are east of it. WSDOT's map marks chain-up and chain-off areas on both approaches, including Chester, Morse Lake and Keechelus west of the summit, and Easton to the east. Use those signed areas when the current rule requires installation. Do not stop on a travel lane to put on chains.

Check fuel and services in North Bend before an eastbound climb. For a westbound trip, check Easton or Cle Elum before climbing. Confirm a specific stop is open when you travel.

If Snoqualmie Pass is closed

Check WSDOT's statewide map before turning toward another Cascade crossing. **US 2 over Stevens Pass** is a northern crossing. **US 12 over White Pass** is a southern crossing. Both have their own weather, restrictions and

possible closures. Neither is a short detour around the summit.

US 97 over Blewett Pass links the east side of the mountains between the US 2 area and the Ellensburg area. It does not, by itself, cross the Cascades from the Seattle side. Check the entire connected route, including US 2 or US 12, rather than treating Blewett as a direct replacement for I-90. Commercial vehicles also need to check route and chain restrictions separately.

Live conditions

milecheckapp.com/passes/snoqualmie/

Cameras, closures and road reports from WSDOT. This sheet was built September 28, 2026. Check the live page before you leave.

Snow and avalanche

Snow depth for this road is measured at the Olallie Meadows SNOTEL station, 4,010 ft, 3.7 miles from the summit and about 1,000 feet above it. The avalanche forecast comes from NWAC. Both are on the live page.

In the car

MileCheck shows your mile marker, the nearest camera and the alerts ahead, on CarPlay and Android Auto. The mile marker works without a signal.

About this map

The numbered stops are a selection from OpenStreetMap along the roads this sheet is about. This map does not show every stop. Gates and seasonal closures are not drawn.
